## How to Run “School of Thought”

### ARCHITECTURAL DEPENDENCIES AND RESOURCES REQUIREMENTS

---

We wrote and tested this project on the **64-bit JVM 1.8**, but it should work on 32-bit as well.

This program can run on Windows, macOS, and Linux. The hardware and software requirements are the same as those on the Java website to run the most recent version.

Download the most recent version of Java by going to <https://www.java.com/en/> and clicking “Free Java Download”. Follows the instructions to download and install the appropriate version of Java for your computer.

When Java is successfully installed, our program can be ran by double-clicking the executable jar file provided.

### USER MANUAL

---

There are not any keyboard or mouse inputs that have special meanings in this program, only what is normally to be expected.
